DETAILED ACTION

Response to Arguments

1. The indicated allowability of claims 49-51 are withdrawn in view of the newly discovered reference(s) to Bianchini, Jr. et al (US Patent 6,463,063 B1). Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claim 49-51 are rejected under 35 U.S.C. 102(e) as being anticipated by Bianchini, Jr. et al (US Patent 6,463,063 B1).

Regarding to claim 49, Bianchini discloses a method comprising coupling a multi-service segmentation and reassembly (MS-SAR) integrated device 10 to a particular switch fabric 22, the particular switch fabric 22 being either a cell-based switch fabric or

packet-based switch fabric, the MS-SAR 10 being configurable in a first way such that the MS-SAR can operate with a cell-based switch fabric, the MS-SAR being configurable in a second way such that the MS-SAR can operate with a packet-based switch fabric (fig. 7 col. 2 lines 40-51); and configuring the MS-SAR in the first way if the particular switch fabric is a cell-based switch fabric but configuring the MS-SAR in the second way if the particular switch, fabric is a packet-based switch fabric (col. 2 lines 51-61); wherein the MS-SAR is configured via to detecting mechanism 26 (col. 2 lines 62-67).

Regarding to claim 50, Bianchini discloses the MS-SAR operates in an ingress mode, the MS-SAR receiving both cell-protocol traffic and packet-protocol traffic (col. 3 lines 41-52).

Regarding to claim 51, Bianchini discloses the MS-SAR operates in an egress mode, the MS-SAR outputting both cell-protocol traffic and packet-protocol traffic (col. 4 lines 33-43).

Allowable Subject Matter

4. Claims 5, 11, 45, and 48 are allowed.
